# KEYPAD NAVIGATION

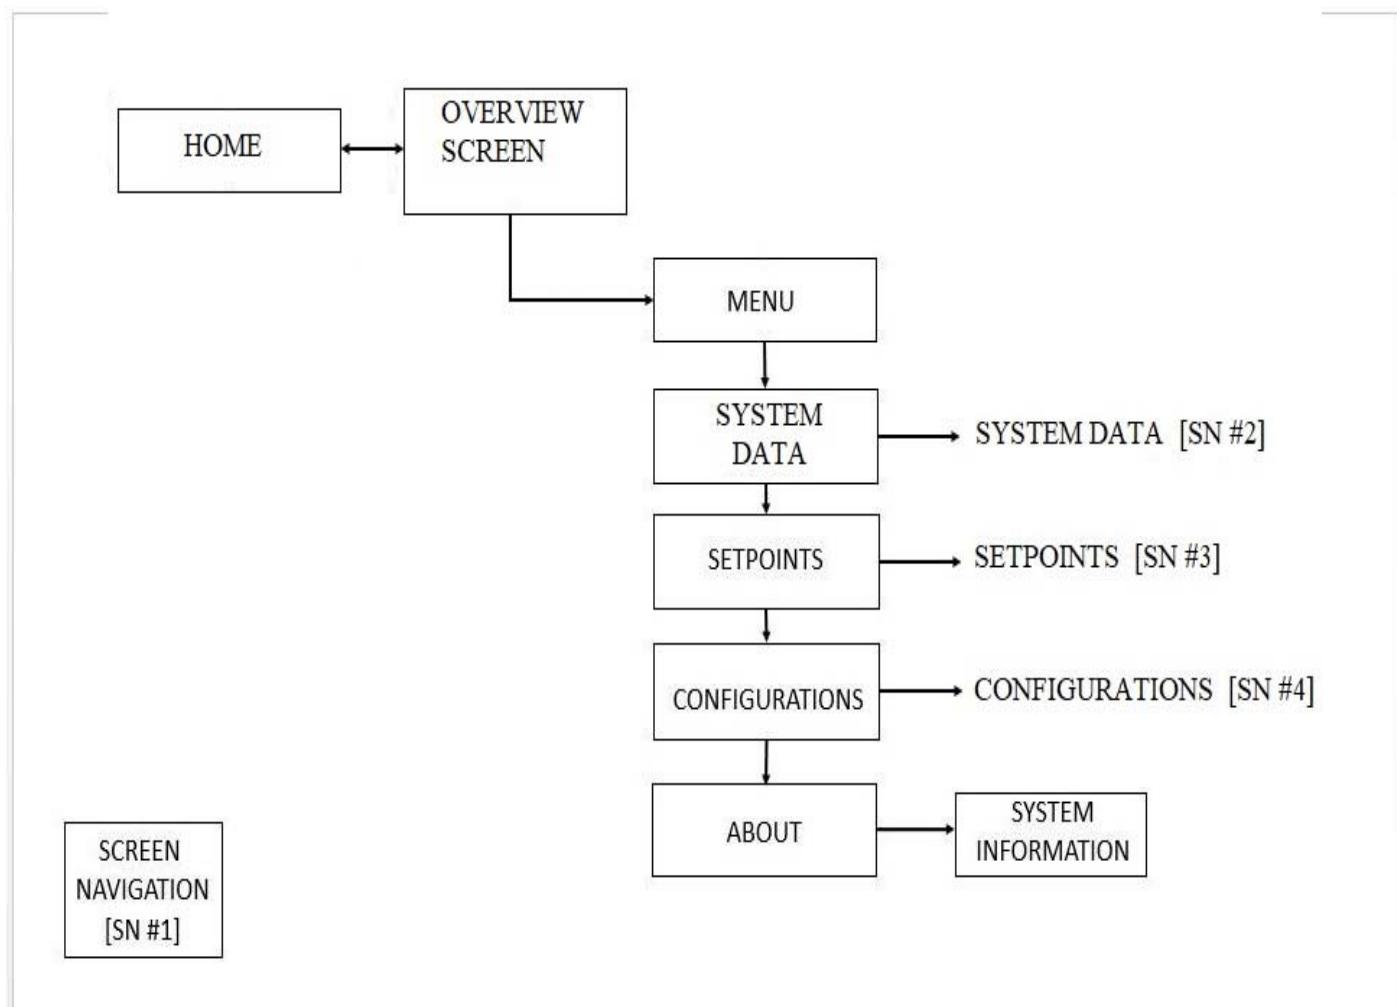

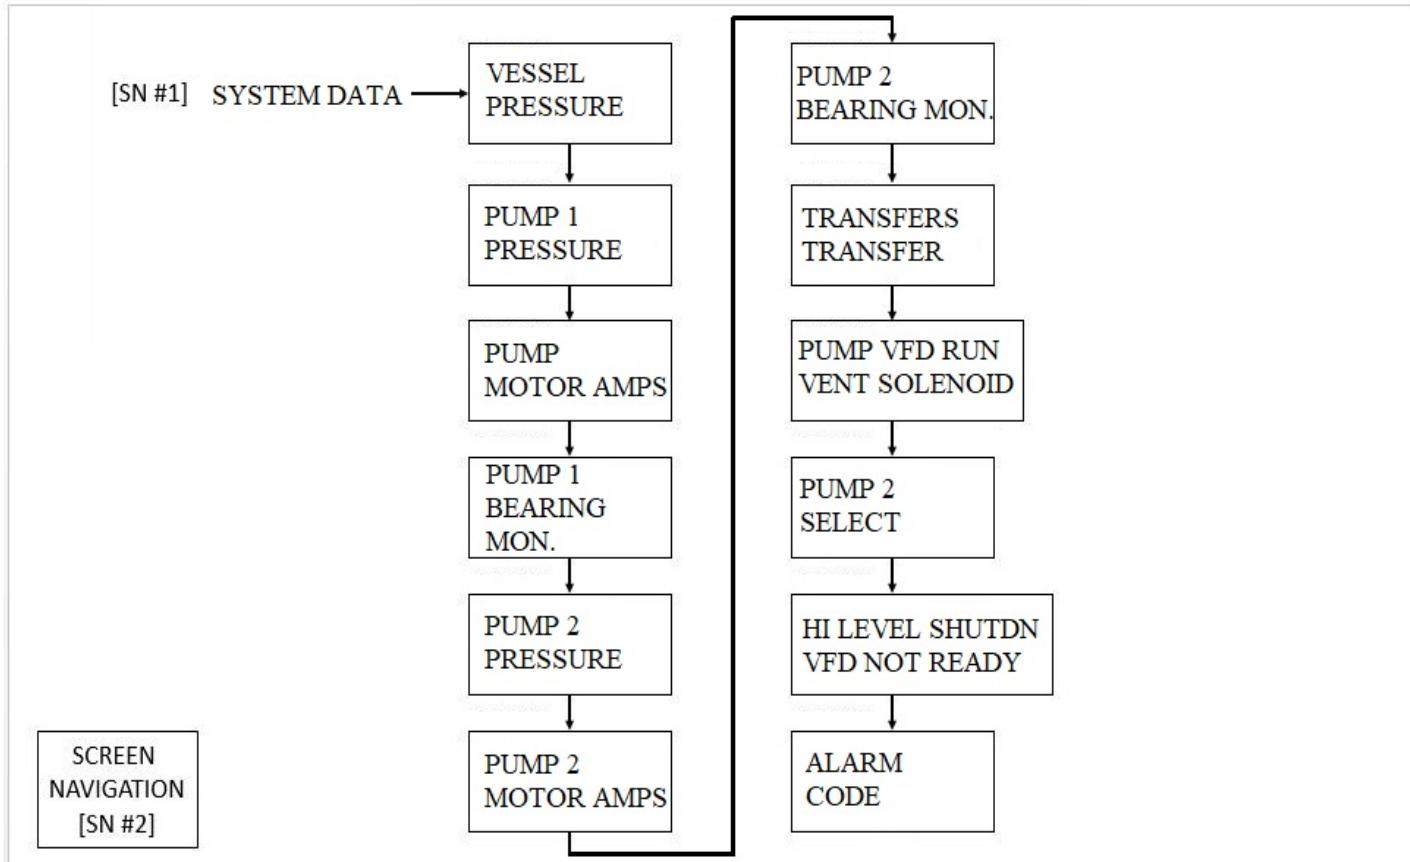

Menu navigation is accomplished by pressing the triangular buttons directly below the display, or the numeric direction buttons 8=up, 2=down, 4=left, 6=right and 5=ENTER.

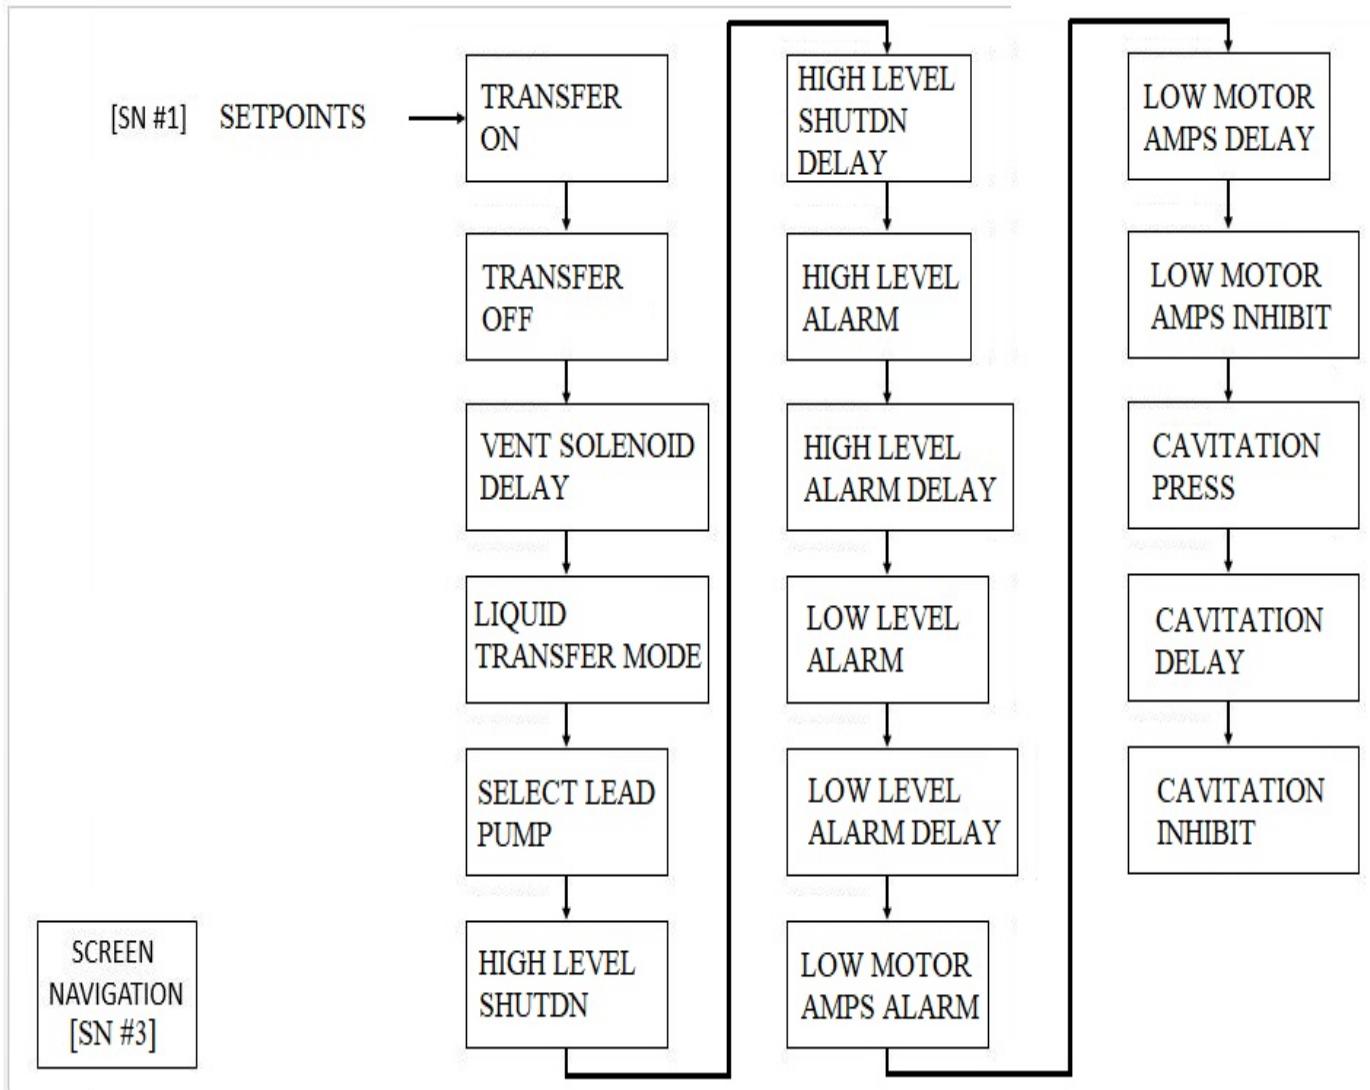

On most screens the word NAV is displayed in the lower left display area. Arrow indicators show the possible menu navigation directions.

Pressing the triangle button below the “MENU” display will take the operator to the main menu screen.

# OVERVIEW SCREEN

The over view screen provides general information on the operating modes and conditions of the system.

**Over View Screen:** This screen has four main areas.

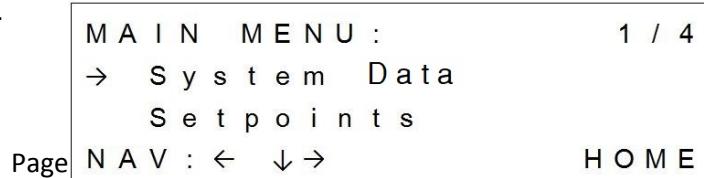

- This will display the Current Level as a percent.
- The second line displays the current number of transfers.
- The third line displays the current transfer mode and status:  
Mode - Off, Auto and Man.  
Status – Off, On, INH (Inhibit. Either Amps or Cavitation)
- The normally blank area in the lower middle area of the fourth line will indicate:
  - “ALARM” (when in alarm), “CUTOUT” (when in cutout). “CAV.” (when in cavitation).
  - Passcode access status. Passcode (when enabled) may show either “ADMIN” or “USER”. When “ALARM” is flashing. Pressing the triangle button below the “ALARM” display will take the operator to the safety menu.
  - Pressing the triangle button below “ADMIN or “USER” will allow the operator to immediately clear the remaining time an operator is allowed to access settings.

1. **MENU** – Selects the “Main MENU” screen.

## MAIN MENU:

The main menu is comprised of a list of 4 menu selections.

- 1) System Status

- 2) Setpoints
- 3) Configurations
- 4) About

**System Status** – Allows the operator to examine all control panel system data. Such as temperature(s), pressure(s), safety information and digital and analog outputs.

**Setpoints** – Gives the operator access to the main control panel operational setpoints.

**Configurations** – Contains system control settings that define the general operation of the system. Such as operating mode, number of pumps. These settings are generally considered “factory” settings.

**About** – This screen presents the operator with the program version, release date, (Modbus device ID, BAUD rate) of the RS485 serial communications port.

# SYSTEM STATUS

The system status menu is comprised of 12 selections.

- 1) Vessel Pressure
- 2) Pump 1 Pressure
- 3) Pump Motor Amps

- 4) Pump 1 Bearing Mon.
- 5) Pump 2 Pressure
- 6) Pump 2 Motor Amps
- 7) Pump 2 Bearing Mon.
- 8) Transfer Status
  - a. Transfer count (Current count of transfer events)
  - b. Transfer Mode and Status (Operating Mode and run Status)
- 9) Digital Outputs
  - a. Pump VFD Run (On, Off)
  - b. Vent Solenoid (On, Off)
- 10) Pump 2 Selection
- 11) Digital Inputs
  - a. Hi Level Shutdn
  - b. VFD Not Ready
- 12) Alarm Code

**Vessel Pressure:**

Displays the current “Vessel Pressure”.

Level: 71 %	1 / 12
Vessel Pressure	
[ 120 PSIG ]	
NAV : < ↓	HOME

**Pump 1 Pressure:**

Displays the current “Pump 1 Pressure”.

Level: 71 %	2 / 12
Pump 1 Pressure	
[ 147 PSIG ]	
NAV : < ↑ ↓	HOME

**Pump Motor Amps:**

Displays the current “Pump Motor Amps”.

Level: 71 %	3 / 12
Pump Motor Amps	
[ 1.2 Amps ]	
NAV : < ↑ ↓	HOME

**Pump 1 Bearing Mon.:**

Displays the current “Pump 1 Bearing Mon.”.

Level: 71 % 4 / 12  
Pump 1 Bearing Mon.  
[ .51 ]  
N A V : ← ↑ ↓ H O M E

**Pump 2 Pressure:**

Displays the current “Pump 2 Pressure”.

Level: 71 % 5 / 12  
Pump 2 Pressure  
[ 154 PSIG ]  
N A V : ← ↑ ↓ H O M E

**Pump 2 Motor Amps:**

Displays the current “Pump 2 Motor Amps”.

Level: 71 % 6 / 12  
Pump 2 Motor Amps  
[ 1.2 Amps ]  
N A V : ← ↑ ↓ H O M E

**Pump 2 Bearing Mon.:**

Displays the current “Pump 2 Bearing Mon.”.

Level: 71 % 7 / 12  
Pump 2 Bearing Mon.  
[ .51 ]  
N A V : ← ↑ ↓ H O M E

**Transfers:**

Displays the current “Transfers” and the current “Transfer” mode and run status. Reset to zero the current count by pressing the keypad arrow below the word “RESET”.

Level: 71 % 8 / 12  
Transfers 3  
Transfer Off Off  
N A V : ← ↑ ↓ RESET H O M E

**Pump VFD Run:****Vent Solenoid:**

Displays the current “Pump VFD Run” status and the current “Vent Solenoid” status.

Level: 71 %	9 / 12
Pump VFD RUN	[Off]
Vent Solenoid	[Off]
N A V : ← ↑ ↓	H O M E

**Pump 2 Select:**

Displays the current “Pump 2 Select” status.

Level: 71 %	10 / 12
Pump 2 Select	[Off]
N A V : ← ↑ ↓	H O M E

**Hi Level Shutdn:****VFD Not Ready:**

Displays the current “Hi Level Shutdn” and “VFD Not Ready” digital Inputs status.

Level: 71 %	11 / 12
Hi Level Shutdn	[Off]
VFD Not Ready	[Off]
N A V : ← ↑ ↓	H O M E

**Alarm Code:**

Displays the current “Alarm Code” message and code. See “Alarm Code Tables”.

Level: 71 %	12 / 12
Alarm Code	[ 0 ]
N A V : ← ↑	H O M E

# SETPOINTS

This menu is comprised of a list of 17 selections.

- 1) Transfer On
- 2) Transfer Off
- 3) Vent Solenoid Delay
- 4) Liquid Transfer Mode
- 5) Select Lead Pump
- 6) High Level Shutdn

MAIN MENU :	2 / 4

# CONFIGURATIONS

This menu is comprised of a list of 7 selections.

1. Number Of Pumps
2. Communications
3. Input Sensors
4. Passcode Setup
5. Circuit Board Temperature
6. Circuit Board Heater
7. Reset All Settings to Their Defaults

MAIN MENU :	3 / 4
→ Configurations	
About	
NAV : <↑↓→	HOME

**Number Of Pumps:**

Indicates the “**Number Of Pumps**” setpoint. Possible settings: 1 through 2.

Configurations : 1 / 7	1 / 7
→ Number Of Pumps [ 1 ]	
NAV : ← ↓ EDIT	HOME

**Communications:**

Displays the “**Communications**” menu.

Configurations : 2 / 7	2 / 7
→ Communications	
Input Sensors	
NAV : ← ↑ ↓ →	HOME

**Communications Device Addr.:**

Sets the “**Communications Device Address.**” The device address is set to equal the rotary DIP switches on the I/O board. ADDR-HI, ADDR-LO.

Configurations : 1 / 4	1 / 4
→ Communications	
Device Addr. [ 1 ]	
NAV : ← ↓ ( SW 1 - 2 )	HOME

**Communications BAUD RATE:**

Sets the “**Communications BAUD RATE**”. 2400, 4800, 9600, 19200, 38400, 57600.

Configurations : 2 / 4	2 / 4
→ Communications	
BAUD RATE [ 19200 ]	
NAV : ← ↑ ↓ EDIT	HOME

**Communications Packets Ok:**

Indicates the “**Communications Packets Ok**” counter. Used for communications diagnostics purposes.

Configurations : 3 / 4	3 / 4
→ Communications	
Packets Ok 0 0 0 0 0	
NAV : ← ↑ ↓ ZERO	HOME

**Communications Packets Bad:**

Sets the “**Communications Packets Bad**” counter. Used for communications diagnostics purposes.

Configurations : 4 / 4	4 / 4
→ Communications	
Packets Bad 0 0 0 0 0	
NAV : ← ↑ ZERO	HOME

**Input Sensors:**

Displays the “**Input Sensors**” menu.

Configurations : 3 / 7	3 / 7
→ Input Sensors	
Passcode Setup	
NAV : ← ↑ ↓ →	HOME

### **Channel #1 Vessel Level:**

Displays the “**Channel #1 Vessel Level**” menu.

Input Sensors :  
→ Channel # 1  
Vessel Level  
NAV : ← ↓ → HOME

## **High End:**

Sets the “High End” range of the sensor.

```
Input Channel 1  
→ High End : [ 1 0 0 . 0 ]  
Low End : [ . 0 ]  
NAV : ← ↓ EDIT HOME
```

## **Low End:**

Sets the “Low End” range of the sensor.

```
Input Channel 1

**Offset:**

I n p u t   C h a n n e l	7
→ O f f s e t :	[ . 0 ]
N A V : < ↑	E D I T   H O M E

Sets the “Offset” for calibration of the sensor.

**Passcode Setup:**

Displays the “Passcode Setup” Menu

```
Configurations : 4 / 7
→ Passcode Setup
Circuit Board
NAV : ←↑↓→           HOME
```

**Passcode:**

Sets the “Passcode”.

```
Configurations : 4 / 7
→ Passcode Setup
Circuit Board
NAV : ←↑↓→           HOME
```

**Circuit Board Temperature:**

Indicates the “Circuit Board Temperature”.

Used for diagnostics purposes.

```
Configurations : 5 / 7
→ Circuit Board
Temperature [ 87 ° F ]
NAV : ←↑↓           HOME
```

**Circuit Board Heater:**

Indicates the status of the internal “Circuit Board Heater”. (On or OFF)

```
Configurations : 6 / 7
→ Circuit Board
Heater           [ Off ]
NAV : ←↑↓           HOME
```

**Reset All Settings To Their Defaults:**

Sets the “Reset All Settings To Their Defaults”. This allows an operator to reset all panel settings to their factory defaults.

```
Configurations : 7 / 7
→ Reset All Settings
To Their Defaults
NAV : ←↑   EDIT   HOME
```

# ABOUT SCREEN

## Display Screen for the “About Screen”.

The “about” screen presents the operator with the current installed program version, release date, (Modbus device ID, BAUD rate of the RS485 serial communications port).

Prog Version :	0 . 9 0
Rel. Date	0 8 - 0 8 - 2 0 1 8
Dev ID :	1 BAUD : 1 9 2 0 0
NAV : <	HOME

# SECURITY:

If the panel is “Locked”. This screen permits the operator to enter a “user” or “admin” passcode. If the entered passcode matches the user or admin passcodes then the panel will be unlocked allowing the operator to access and change settings. The panel will re-enable the lock once the operator stops accessing the settings for 5 minutes. Note that the panel will be in the locked mode after all power cycle events.

# ALARM CODE TABLES

Alarm Index Table Codes		
Alarm Index	Description	Binary Codes
0	No Alarm	
1	High Level Alarm	0b000000000000000X
2	Low Level Alarm	0b000000000000000X0
3	Future	
4	Pump 1 Bearing Alarm	0b000000000000X000
5	Pump 2 Bearing Alarm	0b000000000000X0000
6	Lead Bearing Fault	0b0000000000X00000
7	Lead Amp Pump Fault	0b000000000X000000
8	Future	
9	Future	
10	Future	

Trip Index Table Codes		
Trip Index	Description	Binary Codes
11	High Level Shutdown	0b00000X000000000000
12	Pump Amps Failure	0b0000X0000000000000
13	Pump Bearing Failure	0b000X00000000000000
14	VFD Fault	0b00X0000000000000000
15	High Level Float	0b0X000000000000000000
16	Future	

Alarm Index Table Codes will show the last Failure fully written out on System

Data screen 12/12. The last code is also available via Modbus RTU in holding register 22.

The Binary Codes are the binary bit positions for each failure. Each bit position is set at the time

for each failure. All binary codes are also available via Modbus RTU in holding register 23.

# I/O DESCRIPTIONS

## DIGITAL OUTPUTS

I/O #	DESCRIPTION	TYPE
1	Pump VFD Run	OUTPUT
2	Vent Solenoid	OUTPUT

**PUMP VFD RUN** – When the Level Transfer is requested to start, this output is energized after the “Vent Solenoid Delay”. When the Level Transfer is requested to stop, this output is de-energized.

**VENT SOLENOID** – When the Level Transfer is requested to start, this output is energized. When the Level Transfer is requested to stop, this output is de-energized. After the “Vent Solenoid Delay”.

**Output #3** – Future Output.

**PUMP 2 SELECT** – This input selects the current pump to control. When this output is de-energized pump 1 is selected. When this output is de-energized pump 2 is selected. Note that the associated pump pressure input and bearing monitor input is also selected.

**Alarm Output** – The Alarm Output is energized when in alarm or cutout. The Alarm Output is de-energized when there are no failures.

**Output #6** – Future Output.

**Output #7** – Future Output.  
**Output #8** – Future Output.  
**Output #9** – Future Output.  
**Output #10** – Future Output.

## DIGITAL INPUTS

I/O #	DESCRIPTION	TYPE
1	High Level (Float) Shutdown NC contact	INPUT
2	VFD Not Ready NO contact	INPUT
3	Future	INPUT
4	Future	INPUT
5	Future	INPUT
6	Future	INPUT

**Input #1 HIGH LEVEL SHUTDOWN** – When this input is de-energized for 3 seconds a “High Level Float” Trip will occur.

**Input #2 VFD NOT READY** – When this input is energized for 3 seconds a “VFD Fault” Trip will occur.

**Input #3** – Future input.  
**Input #4** – Future input.  
**Input #5** – Future input.  
**Input #6** – Future input.

# ANALOG INPUTS

AI #	DESCRIPTION	TYPE
1	Vessel Level	4-20 mA
2	Vessel Pressure	4-20 mA
3	Pump 1 Pressure	4-20 mA
4	Pump 1 Bearing Monitor	4-20 mA
5	Pump Motor Current	4-20 mA
6	Pump 2 Pressure	4-20 mA
7	Pump 2 Bearing Monitor	4-20 mA
8	FUTURE	4-20 mA
9	FUTURE	4-20 mA
10	FUTURE	4-20 mA

**VESSEL LEVEL** – Measures the Vessel Level. The sensor is a 0 to 100 %, 4-20 mA input.

**VESSEL PRESSURE** – Measures the Vessel Pressure. The sensor is a 0 to 500 PSIG, 4-20 mA input.

**PUMP 1 PRESSURE** – Measures the Pump 1 Pressure. The sensor is a 0 to 500 PSIG, 4-20 mA input.

**PUMP 1 BEARING MONITOR** – Measures the Pump 1 Bearing Monitor, The sensor is a 0 - 1.00 4-20 mA input.

**PUMP MOTOR CURRENT** – Measures the Pump Motor Current. The sensor is a 0 – 17.5 amps 4-20 mA input.

**PUMP 2 PRESSURE** – Measures the Pump 2 Pressure. The sensor is a 0 to 500 PSIG, 4-20 mA input.

**PUMP 2 BEARING MONITOR** – Measures the Pump 2 Bearing Monitor, The sensor is a 0 - 1.00 4-20 mA input.

**Input #8** – Future sensor input.

**Input #9** – Future sensor input.

**Input #10** – Future sensor input.

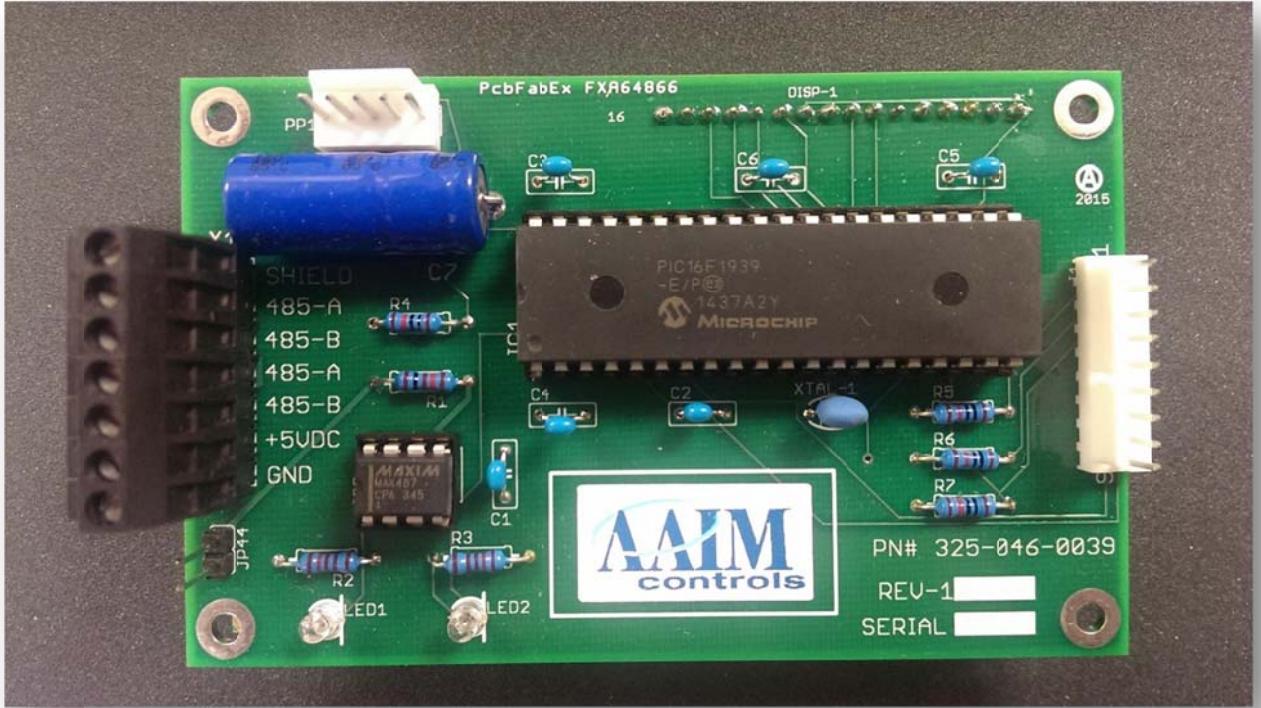

# ANALOG OUTPUTS

AI #	DESCRIPTION	TYPE
1	Liquid Level Output (0 To 100 % = 4-20ma SIGNAL)	4-20 mA
2	Pump VFD Control Speed (0 To 100 % = 4-20ma SIGNAL)	4-20 mA
3	Future	4-20 mA
4	Future	4-20 mA
5	Future	4-20 mA
6	Future	4-20 mA

**Liquid Level Output** – This 4-20 mA output provides a remote 0 – 100% signal representing the current liquid level.

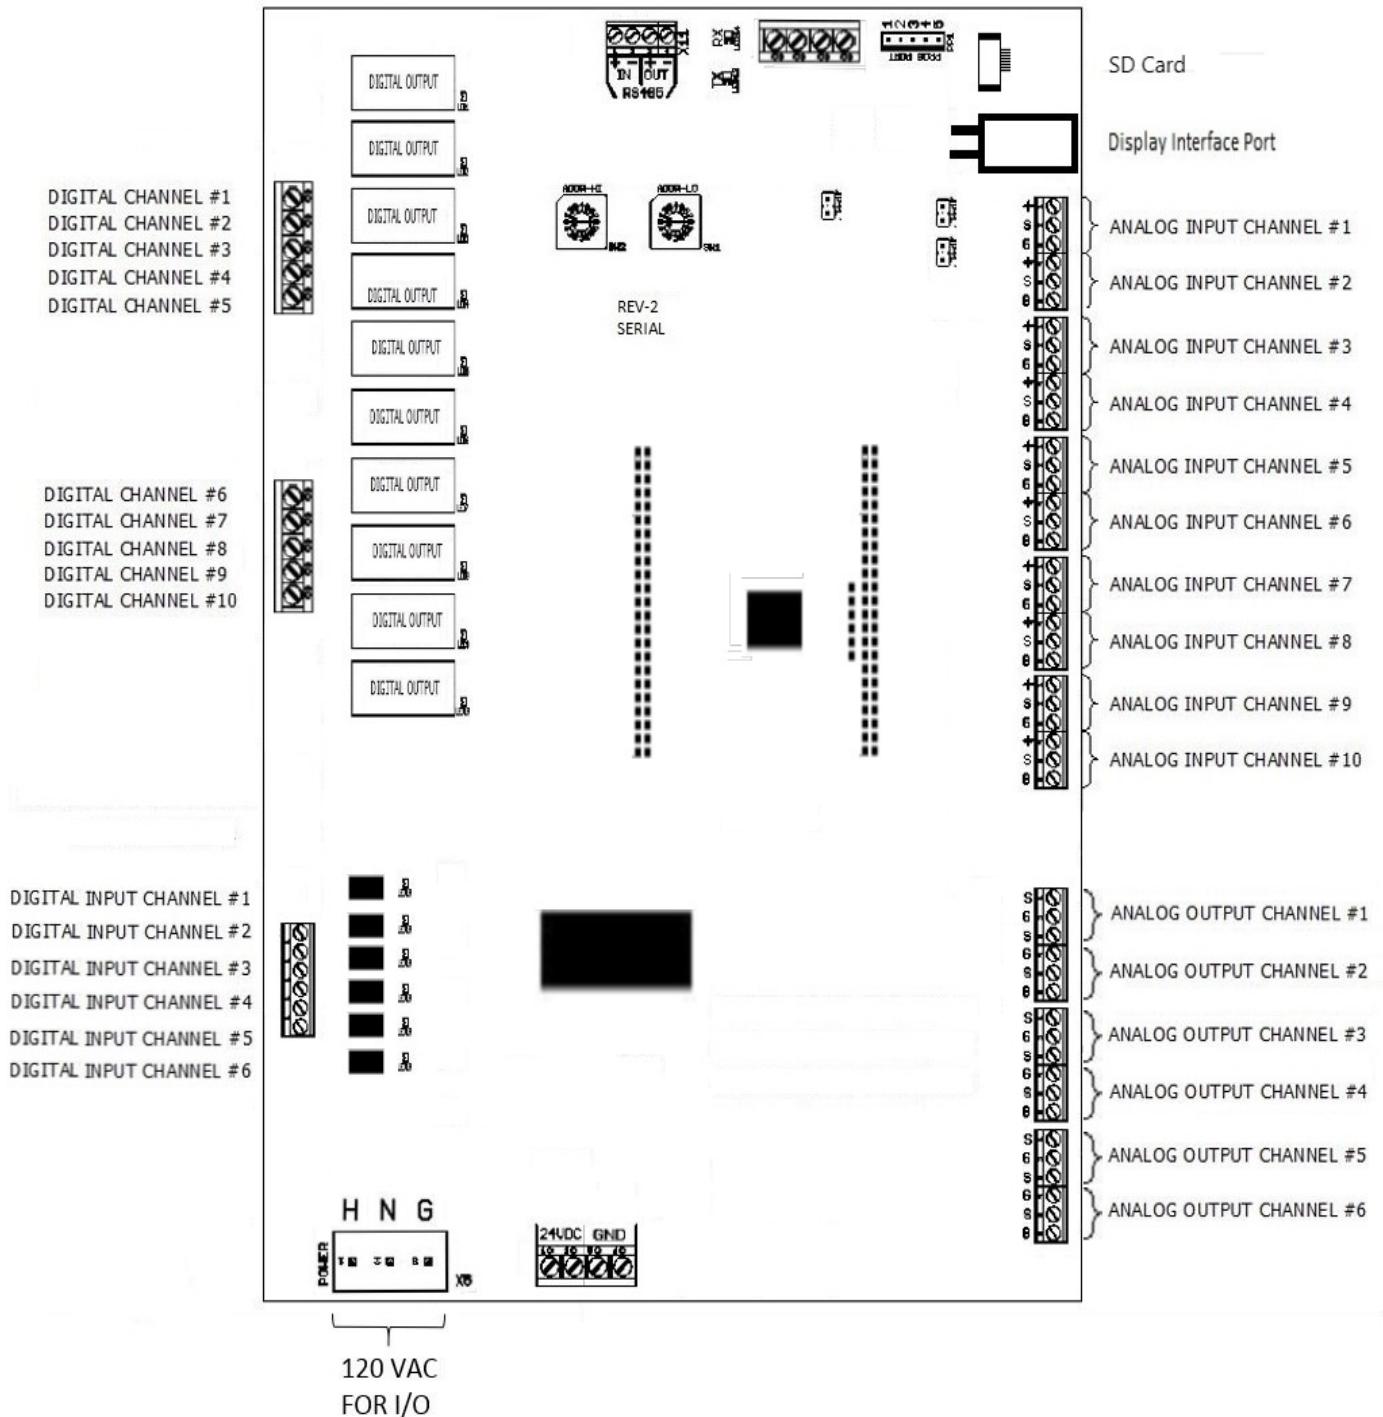

**Pump VFD Control Speed** – This 4-20 mA output is connected to a variable frequency drive (VFD) which controls the pump(s) VFD SPEED.

# DISPLAY ASSEMBLY INTERFACE

**Display Assembly Interface** - The display assembly interface acts as an HMI (Human Machine Interface) for the control panel. The microprocessor in this assembly scans the keypad for entry and displays the information on the OLED display screen. Information is passed from the display assembly interface to the main microprocessor controller on the I/O board.

## INPUT POWER

- |                 |            |                              |
|-----------------|------------|------------------------------|
| • 88 – 125 VAC  | 47 – 63 Hz | * Standard                   |
| • 185 – 264 VAC | 47 – 63 Hz | * Optional (Contact factory) |

## DC OUTPUT POWER

- |          |                       |
|----------|-----------------------|
| • 24 VDC | 2.2A (52.8 Watts max) |
|----------|-----------------------|

## ENVIRONMENTAL (CONTROLLER ONLY)

- |                         |                                    |
|-------------------------|------------------------------------|
| • Operating temperature | -40°F to 140°F (-40°C to 60°C)     |
| • Storage temperature   | -40°F to 158°F (-40°C to 70°C)     |
| • Humidity              | 5% to 90% @ +40°C (non-condensing) |
| • Vibration             | 2.0g's (19.61m/s <sup>2</sup> )    |
| • Shock                 | 100g's (980m/s <sup>2</sup> )      |
| • RFI Immunity          | 15v/m (15MHz to 1.5GHz)            |
| • EMI Immunity          | Complies with CE EMC directive     |

## ENVIRONMENTAL (CONTROLLER INTEGRATED WITH POWER ELECTRONICS)

- |   |                                    |
|---|------------------------------------|
| • Operating temperature (w/o heater)                    | 32°F to 140°F (0°C to 60°C)        |
| • Low Temp operation<br>(-20°F / -29°C minimum ambient) | Panel heat option required:        |
| • Storage temperature                                   | -40°F to 158°F (-20°C to 70°C)     |
| • Humidity  | 5% to 90% @ +40°C (non-condensing) |
| • Vibration   | 2.0g's (19.61m/s <sup>2</sup> )    |
| • Shock   | 100g's (980m/s <sup>2</sup> )      |
| • RFI Immunity  | 15v/m (15MHz to 1.5GHz)            |
| • EMI Immunity  | Complies with CE EMC directive     |

## DISPLAY

- |                    |  |
|--------------------|--|
| • Size             | 2.76" W x 0.825" H (70.16 mm x 20.95 mm) |
| • Character format | 4 Lines x 20 Characters                  |
| • Type             | OLED                                     |
| • Brightness       | 90 cd/m <sup>2</sup>                     |

- Contrast Ratio 2,000:1
- Viewing Angle 80° from all angles
- Life > 100,000 Hours

#### KEYPAD / OVERLAY

- Material Polycarbonate with UV coating
- Keys Stainless Steel snap domes

#### CERTIFICATIONS

Agency approvals UL 508A, cUL

#### DIGITAL OUTPUTS

Type	Relay
Isolation	4 KV
Continuous operating current	3 Amps maximum
Peak 1-cycle surge current	100 Amps maximum
Voltage	12 to 140 VAC
Fusing	6 Amps
Temperature rating	-30°C to +80°C

#### DIGITAL INPUTS

Type	Optically isolated
Isolation	4 KV
Voltage	90 TO 140 VAC
Temperature rating	-30°C to +80°C

#### ANALOG INPUTS

- Type 4-20 mA

#### ANALOG OUTPUTS

- Type 4-20 mA

**TEMPERATURE SENSORS**

-50°C to +200°C, 4-20mA output Danfoss 084Z4114 MBT3560

**PRESSURE SENSORS**

0-200 PSIA, 4-20mA output Danfoss 060G3807 AKS 3000

0-500 PSIG, 4-20 mA output Danfoss 060G3807 AKS 3000

Material 100% stainless steel welded parts

Over pressure 2X Range

Burst pressure 5X Range

Technology Signal-conditioned silicon strain gauge

Accuracy +/- 0.5% of span

Excitation voltage 10 to 30 VDC

Temperature range -40°F to +185°F (-40°C to +85°C)

**MOTOR CURRENT SENSOR**

Technology 4-20mA transmitter

**EXTERNAL COMMUNICATIONS PORTS**

RS-485 (Standard) 2.4K to 57.6K baud

Protocol MODBUS RTU
