EVAPCO for LIFE

EVAPCO is more than a name. We are the global innovator in heat transfer solutions for the commercial HVAC, industrial refrigeration, power and industrial process markets. We pledge to make everyday life easier, more comfortable, more reliable and more sustainable for people everywhere.

OUR COMMITMENT

We never stop innovating. We set out to find groundbreaking solutions that transform the way the world works for the better. We also guarantee performance and put every solution through rigorous research and testing to ensure maximum efficiency and reliability.

PROTECTING THE ENVIRONMENT

Innovation and environmental sustainability go hand-in-hand at EVAPCO. Our industrial heat transfer equipment not only conserves natural resources and helps reduce noise pollution, but also features recycled steel content in construction. From sound reduction to water conservation to chemical elimination, we are developing new technologies that deliver ultimate operating advantages to our clients while protecting the planet for every generation to come.

From the smallest factory assembled cooling tower to the largest field erected air-cooled steam condenser, we offer heat transfer products designed to meet the water and energy requirements for any project. We are committed to providing solutions that are energy efficient and conserve water.

Our latest heat transfer solutions are the eco-Air™ Series Dry Coolers, eco-Air Series Air Cooled Condensers, and eco-Air Series Adiabatic Coolers and Condensers. The eco-Air Series completes our successful eco-family of closed circuit coolers and condensers with water-saving dry and hybrid technology.

As an industry leader in independent, third-party performance certifications, our fully-rated products enable you to operate your cooling systems efficiently and with complete peace of mind.

The eco-Air Series of dry and adiabatic coolers offers unparalleled flexibility in a wide range of capacities, footprints, motor types, and control options.
Features and Applications at a Glance

EVAPCO offers an extensive selection of open cooling towers and closed circuit coolers for all types of applications. Use the chart below to help you find the right EVAPCO unit for your next project.

| eco-Air Adiabatic Series | An adiabatic, induced draft cooler, that minimizes water usage while providing maximum heat rejection for any outdoor applications. A pre-cooling system is used to increase the capacity for high dry bulb and high temperature applications. Available in NEMA or EC motors. | • 18 to 318 nominal tons  
• Adiabatic pre-cooling system pre-cools the entering air for increased energy savings and capacity while minimizing water usage.  
• 304 stainless steel coils and stainless construction as standard for increased corrosion resistance and longevity.  
• 100% fully rated guarantee  
• IBC Compliant  
• Shake table tested for 1.5 importance factor installations | ![Diagram of Adiabatic Series](image) |
| eco-Air V Series       | A dry induced draft cooler with no water usage, providing maximum surface area per footprint. The innovative design provides optimal cooling while cutting the high costs of water and water treatment. Available with NEMA or EC motors. | • 18 to 318 nominal tons  
• Runs 100% dry – No water treatment  
• 304 stainless steel coils and stainless construction as standard for increased corrosion resistance and longevity.  
• 100% fully rated guarantee  
• IBC Compliant  
• Shake table tested for 1.5 importance factor installations | ![Diagram of V Series](image) |
| eco-Air Flat Series    | Low profile, flat, induced draft unit with bottom airflow clearance is great for any elevated outdoor application. Available with NEMA or EC motors. | • 19 to 212 nominal tons  
• Runs 100% dry – No water treatment  
• 304 stainless steel coils and stainless construction as standard for increased corrosion resistance and longevity.  
• 100% fully rated guarantee  
• Low profile design for easy rigging  
• IBC Compliant  
• Shake table tested for 1.5 importance factor installations | ![Diagram of Flat Series](image) |
## Advanced Motor Technology

**EC**
The latest development in energy efficient fans is here, the EC fans. The EC motors have zero maintenance, redundancy, and built-in integral speed control.

**NEMA**
The premium direct drive motors are designed for severe duty and maximum efficiency. The NEMA motors are VFD ready and have sealed bearings for zero maintenance.

## Eco-Air Design Features

### Coil
The 304L stainless steel coils come standard on all eco-Air units for increased corrosive resistance and longevity.

### Fins
Multiple fin thicknesses are available to accommodate a range of industrial applications. The fins have widths of both 0.01" and 0.0005" and fin spacing from 6" to 12".

### Epoxy Coated Fins (optional)
Discover the increased corrosion resistant fin coating. Unlike most coatings the epoxy coating does not decrease the capacity.

### Pre-Cooling System (optional)
The adiabatic pads are constructed of a sturdy impregnated cellulose. Wetted pads can be utilized to pre-cool the entering air for increased energy savings, greater capacity, and minimal water usage. The adiabatic pads are great for high dry bulb and high temperature applications by depressing the dry bulb.
Innovative Design Features

With EVAPCO, you get a partner you can count on to keep you at the cutting edge of your field. That’s because we build innovation into every HVAC solution that we deliver to you. Here are just some of the game-changing features we’ve designed to make everyday life simpler for you and your clients.

**EVAPAK® Counterflow Fill**

Used inside all EVAPCO counterflow and forced draft cooling towers, as well as the ESWA/B, EVAPAK® Counterflow Fill is specially designed to induce a highly turbulent mix of air and water for superior heat transfer. Special drainage tips allow high water loadings without excessive pressure drops.

EVAPAK® Counterflow Fill is constructed of inert polyvinyl chloride (PVC), so it will not rot or decay. It can also withstand water temperatures of 130° F/55° C. (An option for higher water temperatures is also available. Consult your EVAPCO representative to learn more.)

The bottom support of the fill section, combined with the unique way in which EVAPAK® Counterflow Fill’s cross-fluted sheets are bonded together, greatly enhances the fill’s structural integrity, making it usable as a working platform.

EVAPAK® is also self-extinguishing with a flame spread rating of 5 per ASTM-E84-81a.

**EVAPAK® Crossflow Fill**

The AXS features bonded block fill with both integral louvers and drift eliminators. The EVAPAK® Crossflow Fill design prevents any air from bypassing the water leading to a decrease in capacity. The fill is also bottom supported, preventing any sagging and allowing for easier routine basin maintenance.

**Optional Fill Types**

EVAPCO also offers alternate fills as an option on most cooling towers for special applications. Consult your EVAPCO representative for further details.

**Titan-Pak** stainless steel fill is designed for corrosive and high temperature applications. It is constructed completely of stainless steel and is fire retardant. If properly maintained, this stainless steel fill will last the life of the cooling tower.

**Wide-Pak** cross-fluted fill is often used in dirty water applications. It has a lower surface area than EVAPAK® fill, therefore towers need to be sized appropriately to account for the change in available capacity.

**VERTICLEAN®** vertical-fluted fill is often used in dirty water applications and can handle oil or greases in the system up to 5 ppm. VERTICLEAN® fill has a lower surface area than the Wide-Pak fill, therefore towers need to be sized appropriately to account for the change in available capacity.
How Our Coils are Made

EVAPCO’s coils are manufactured under the most stringent quality control procedures. It all starts with our circuits, which are made of high quality steel tubing formed into a continuous serpentine circuit. Each circuit is then inspected and tested before being welded into a framed coil assembly. Once assembled, the entire coil is pneumatically tested under water at 400 psig to ensure its integrity, then hot-dip galvanized for industrial strength corrosion protection.

Sensi-Coil® Technology [US Patent #7,296,620]
Available on the EVAPCO ESWB closed circuit cooler, Sensi-Coil’s® unique coil arrangement packs the maximum number of Thermal-Pak® elliptical tubes together to deliver over 20% more additional coil surface area.

Ellipti-fin® Technology [Patent Pending]
Featuring Elliptical Spiral Fin Coil Technology
Discover the industry’s most efficient closed circuit cooling coil ever. Unlike coils made with typical finned round tubes, Ellipti-fin® is made with our patented Thermal-Pak®, a finned elliptical tube design that lowers airflow resistance to increase your evaporative and dry cooling capacity and boost your energy and water savings.

Thermal-Pak® Cooling Coil
All EVAPCO closed circuit coolers utilize our patented Thermal-Pak® coil design which assures greater operating efficiency. The elliptical tube design allows for closer tube spacing, resulting in greater surface area per plan area than round-tube coil designs. In addition, the Thermal-Pak® design has lower resistance to airflow and also permits greater water loading, making it the most effective design available.

ARID-fin Pak™ Dry Cooling Coil
Installed inside the discharge airstream of the eco-ATWB-H is EVAPCO’s breakthrough ARID-fin™ Pak dry cooling coil. Piped in series with the units evaporative cooling coil to deliver latent and sensible cooling simultaneously allowing for higher dry bulb switchover temperatures and maximum water savings.

The ARID-fin™ Pak coil is constructed of 304L stainless steel tubes with aluminum/manganese alloy fins separated by fully drawn collars to maintain consistent fin spacing and continuous surface contact over the entire tube for superior heat transfer and protection.

CROSSCOOL™ Internal Tube Enhancement Technology
Designed to make EVAPCO’s closed-circuit coolers even more efficient, this groundbreaking technology rifles the interior of your cooler’s full footprint coil to deliver more heat transfer per plan-area.

TITAN COIL
Manufactured from 304L stainless steel, the optional TITAN COIL is available in both the Thermal-Pak® and Sensi-Coil® designs. The TITAN COIL takes our patented elliptical tube design and upgrades it with additional durability, corrosion resistance and protection with five-year coil warranty.
**Patented Efficient Drift Eliminators**

An extremely efficient drift eliminator system is standard on all EVAPCO cooling towers and closed circuit coolers. The system removes entrained water droplets from the air stream to limit the drift rate to less than 0.001% of the recirculating water rate in most instances.

With a low drift rate, EVAPCO units can be located in areas where minimum water carryover is critical, such as parking lots or building walls.

**EvapJet™ Nozzle:** The EvapJet’s™ large orifice nozzles prevent clogging and are threaded for easy removal at a positive positioning. The large uniform spray pattern minimizes the amount of nozzles required for even greater flow ranges.

**ZM®II Nozzle:** Closed circuit coolers, which have a different spray pattern requirement than cooling towers, use the ZM®II nozzle. These nozzles are threaded into the PVC header pipe at the proper orientation and have a large orifice to prevent clogging.

**Pressurized Water Distribution System**

EVAPCO’s induced-draft cooling tower water distribution system is made of schedule 40 PVC pipe and EvapJet™ ABS plastic water diffusers for central corrosion protection. The piping is easily removable for cleaning. The water diffusers have a 1-inch diameter (25mm) opening and are practically impossible to clog. They also have an anti-sludge ring extending into the headers to prevent sediment from building up in the diffuser opening. In addition, the spray branches have threaded end caps to allow easy debris removal.

**Drive System Access**

All EVAPCO cooling towers and closed circuit coolers come standard with premium efficient, inverter-ready fan motors that can be used with variable frequency drive (VFD) systems for precise capacity control.

The mechanical drive systems are easy to access and easy to maintain. Bearing lubrication and belt adjustment can be performed from outside the unit. All units with T.E.F.C. fan motors located outside of the unit are protected with a removable motor cover or fan screen. See figure 1.

T.E.A.O. motors located inside the fan casing are mounted on a swing-out motor mount on an adjustable base for easy removal. See figure 2.

**Patented Efficient Drift Eliminators**

An extremely efficient drift eliminator system is standard on all EVAPCO cooling towers and closed circuit coolers. The system removes entrained water droplets from the air stream to limit the drift rate to less than 0.001% of the recirculating water rate in most instances.

With a low drift rate, EVAPCO units can be located in areas where minimum water carryover is critical, such as parking lots or building walls.

The drift eliminators are constructed of an inert polyvinyl chloride (PVC) plastic material which effectively eliminates corrosion of these vital components. They are assembled in sections to facilitate easy removal for inspection of the water distribution system.
Basin Access
The cold water basin section on EVAPCO induced-draft units is easily accessible from ground level by simply loosening the two quick-release fasteners on the inlet louver assemblies and lifting out the lightweight louver. The basin can be accessed from all four sides of the unit. This open basin design enables the unit to be easily cleaned.

Louver Access Door
To aid in basin maintenance, many induced draft models can be equipped with an optional louver access door. This feature allows easy access to perform routine maintenance and inspection of the makeup assembly, strainer screen, and basin without removing an entire inlet louver. This feature is standard on models with 5-foot and taller louver sizes.

Clean Pan Design
EVAPCO units feature a completely sloped basin from the upper to lower pan section. This “clean pan” design allows the water to be completely drained from the basin. The spray water will drain from the upper section to the depressed lower pan section where the dirt and debris can be easily flushed out through the drain. This design helps prevent buildup of sedimentary deposits and biological films, and minimizes standing water.

Note: On 4-foot-wide units, the pan is sloped without the step.

WST Air Inlet Louver (US Patent #7,929,196)
EVAPCO’s water and sight tight (WST) louvers keep water in and sunlight out of induced-draft products. The unique non-planar design is made from lightweight framed PVC sections which have no loose hardware, enabling easy unit access. The louver’s air channels are optimized to block all line-of-sight paths into the basin eliminating splash-out, even when the fans are off. And because all sunlight is blocked, algae growth is minimized.
**Super Low Sound Fan** *(Optional)*

When you’re tasked with achieving the lowest sound levels possible, there’s only one choice: the EVAPCO super low sound fan, the quietest, most noise-efficient fan in the industry. Made of heavy-duty reinforced polyester, the ultra-wide chord blades have a forward swept design and rounded edges to minimize the sound caused by flow separation and vortex shedding. The end result is a sound pressure level 9 to 15 dB(A) lower than standard fans, depending on the specific unit selection and measurement location.

**Forced-Draft Sound Attenuation** *(Optional)*

EVAPCO’s forced-draft coolers and towers feature a centrifugal fan design that operates at lower sound levels, making the units ideal for installations where noise is a concern. The fan’s design can be customized with a variety of intake stages and discharge attenuation packages to greatly reduce sound levels even further for extremely noise sensitive applications.

**Stainless Steel Options**

All EVAPCO cooling towers and closed circuit coolers are constructed of G235 hot-dip galvanized steel as standard. A variety of stainless steel construction upgrade options are available in both 304 and 316 stainless steel, including stainless steel cold water basins and complete stainless steel units.

**CTI Certified-Standard 201**

Every EVAPCO cooling tower and closed circuit cooler is independently certified by the Cooling Technology Institute (CTI). This certification guarantees that the unit will meet rated capacities, eliminating the necessity for costly field performance tests.

**Exclusive Five (5)-Year Motor & Drive Warranty**

EVAPCO provides each unit with a 5-year motor and drive warranty which covers the fan(s), bearings, pulleys, shafts, belts, gear reducer(s), drive shaft(s), drive couplings, electric fan motor(s), and mechanical equipment supports on both belt and gear drive units.

**International Building Code (IBC) Compliant Designs**

EVAPCO has independently certified its units to withstand seismic and wind loads in ALL geographic locations and installations in accordance with IBC 2012.

*Mark owned by the Cooling Technology Institute*
**Smart Shield® Solid Chemical Water Treatment System**

Proven solid chemistry. A revolutionary feed system. Together, these make Smart Shield®, the easiest and safest chemical water treatment system available today, featuring:

- A patented, controlled-release scale and corrosion inhibitor that is fed whenever your spray water pump is operating.
- A solid chemistry design that eliminates liquid chemical hazards—including spills—and the need for expensive feed pumps.
- ‘Bag in Bag’ no-touch chemical replenishments for easier, safer reloads.
- Reduced packaging, shipping, and handling for a lower carbon footprint than liquid chemical options.

Watch a short product video at [smartshield.evapco.com](http://smartshield.evapco.com).

---

**Pulse~Pure® Non-Chemical Water Treatment System**

Pulse~Pure® from EVAPCO uses pulsed electric field technology to treat your water without chemicals. It’s the environmentally responsible solution that also packs a powerful water-treating punch:

- Emits short, high frequency bursts of low energy electromagnetic fields to recirculating water.
- Delivers a guaranteed maximum bacterial count of 10,000 CFU/ml in the cooling water.
- Controls scale, corrosion, and microbiological growth with absolutely no chemicals required.
- Compact design eliminates moving parts and ensures low energy consumption.
